11-11-2026 Wed 03:12:07 NORTH GATE

Now you know.

LINE CROSSING · PERSON A→B

Not a cat. A man with a bag, coming through the north gate five seconds ago.

Kalytera Cloud sent the video with the alarm.

KALYTERA CLOUD

The alarm arrives with the video.

Can't we just phone the site?
At 03:12 nobody answers. Calls and a patrol can take half an hour. The video takes one look.

New cameras?
No. The ones on the wall will do: Hikvision, Dahua, Axis, or anything that speaks RTSP or RTMP.

New software at the monitoring station?
No. The alarm arrives over SIA DC-09, as it always has. The video opens in a browser.

A contract to try it?
No. Live view of one site, up to eight cameras, is free.

THE OTHER 23 HOURS AND 59 MINUTES

Camera walls up to 6×6 · recording kept 1 to 30 days · search by people or vehicles · MP4 export · roles and an audit history · English and Spanish

Walk through your own gate.

Lend us a few of your cameras for a pilot. Then cross your own line and watch what your monitoring station receives.

KALYTERA CLOUD 3.0 · NOVEMBER 2026

Product screens are simplified. Camera pictures are illustrations.

Kalytera | CLOUD

23:41	ZONE 2	A cat.
00:58	ZONE 4	The wind.
01:36	ZONE 1	A spider on the lens.
02:27	ZONE 4	Headlights.
03:12	ZONE 4	?

Is it real?

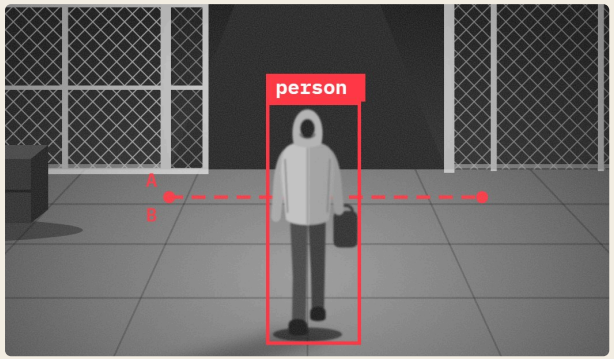

It is almost always nothing.
Almost.

CLOUD VIDEO · VERIFIED ALARMS

03:12:07 DETECT

A camera notices him.

Not a new camera: the one that has been on that wall for years, connected directly to Kalytera Cloud. It watches the picture for people and vehicles, and raises the alarm when one crosses a line, enters a zone, hangs around or gathers in a group. A cat is not on the list.

The alarm can also come from

- An intrusion panel: SPC, Galaxy or any SIA DC-09 panel
- An alarm email sent by a camera
- An input wired at the site

Then a second look

Before one of these reaches the monitoring station, an optional AI check looks at the cameras. Somebody there: it goes out at once. Nobody: it can stop here.

Connects over

RTSP · RTMP / RTMPS · Hikvision ISUP · Hikvision SDK · Dahua AutoReg · Bridge Agent

Push, ISUP, AutoReg and the Bridge Agent call out from the site. No ports to open. Video analytics run on cameras connected directly, not through the Bridge Agent. Talking through a speaker needs a Bridge Agent at the site.

03:12:12 VERIFY

You are already watching.

The alarm reaches the monitoring station the way alarms always have: over SIA DC-09. Encrypted, it brings a link. One click shows the seconds before the alarm, the seconds after, and the gate right now. No account, no app, and nobody phones the owner to ask if it is him.

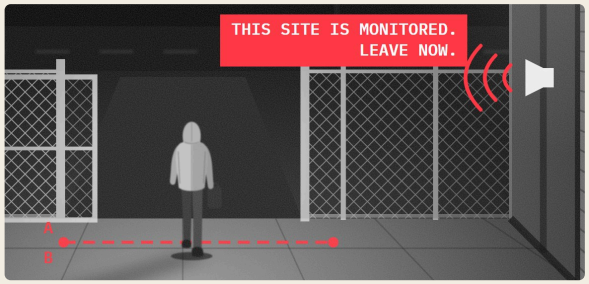

CLIP	LINK LIFE	ENCRYPTION
3 to 60 s each side	1 h to 7 days	AES-128, 192 or 256

03:12:40 RESPOND

He hears your voice.

In the Kalytera Cloud portal you hold a button and speak through the Axis speaker on the wall. He was sure nobody was watching. You finish there too: the lights, the response procedure, the contacts, and a clip kept as evidence.

From the portal

- Talk over Axis speakers
- Play a recorded message
- Lights, sirens, gates
- Arm and disarm
- Follow the procedure
- Call the contacts

Start free

Live FREE	One site, up to eight cameras, live view.
Verify	Video evidence, video links and delivery to a monitoring station.
Verify + VMS	Cloud recording, playback and export.

Verify and Verify + VMS are quoted after a pilot on your own cameras.

Example sequence. Real times depend on cameras, connections and settings.
