Kalytera | CLOUD

23:41	ZONE 2	A cat.
00:58	ZONE 4	The wind.
01:36	ZONE 1	A spider on the lens.
02:27	ZONE 4	Headlights.
03:12	ZONE 4	?

Is it real?

It is almost always nothing.
Almost.

11-11-2026 Wed 03:12:07
Now you know.
Not a cat.

NORTH GATE

KALYTERA CLOUD

The alarm arrives with the video.

TODAY: EVERYTHING THE MONITORING STATION KNOWS

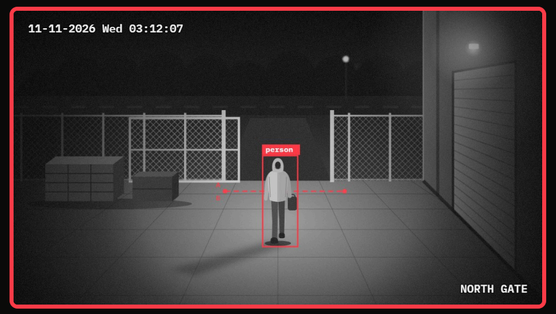

- 03:12:07 ALARM · ZONE 4 · NORTH GATE

?

Wind? A spider? Him?

WITH KALYTERA CLOUD: THE SAME ALARM, WITH ITS VIDEO

- 03:12:07 ALARM · ZONE 4 · NORTH GATE ▶ VIDEO LINK

The same SIA DC-09 your monitoring station has used for years, encrypted. Nothing to install there. The link opens in a browser.

THE SAME ALARM, TWICE

39 minutes. Or 33 seconds.

BY PHONE AND PATROL

03:12	Alarm. Zone 4.
03:13	Call the site. Nobody answers.
03:16	Call the owner. Voicemail.
03:21	Call the second contact. An hour away.
03:24	Send a patrol.
03:51	The patrol arrives. Gate open. Nobody there.

39 minutes later, nobody knows who it was.

WITH THE VIDEO

03:12:07	Alarm, with the video.
03:12:12	One look. A man with a bag at the north gate.
03:12:40	Over the speaker, from the Cloud portal: “This site is monitored. Leave now.”

33 seconds later, you watched him leave.

EXAMPLE SEQUENCES

VERIFY

One click. No phone call.

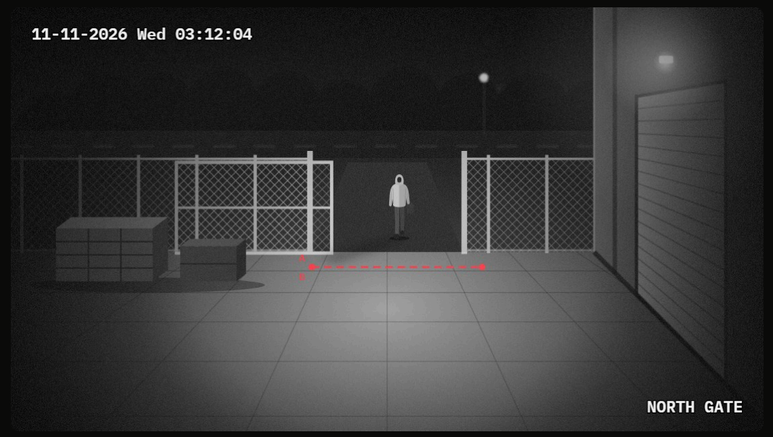

- It travels with the alarm, on encrypted SIA DC-09
- The seconds before the alarm, the seconds after, and the gate right now
- In any browser, or inside the console your operators already use
- No account. No app. Nothing to install
- The link expires on its own, from 1 hour to 7 days

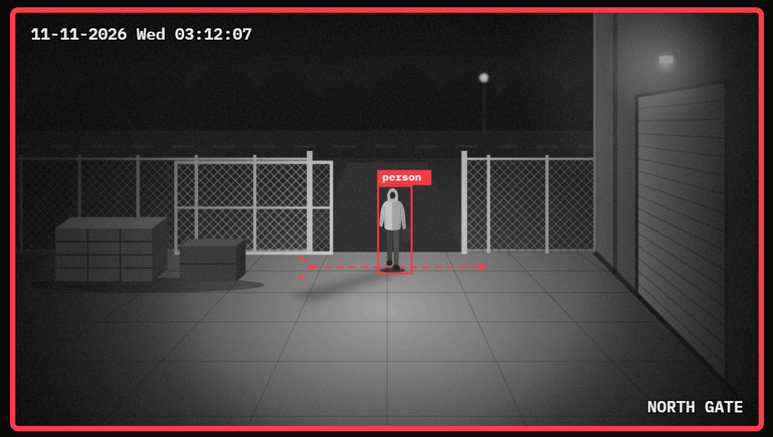

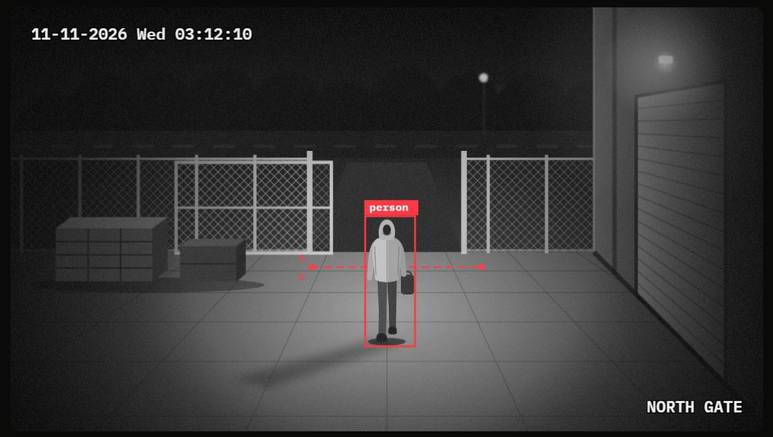

VERIFY

The clip starts before the alarm.

When the alarm fires, the seconds before it are already saved. You choose how many: 3 to 60 on each side.

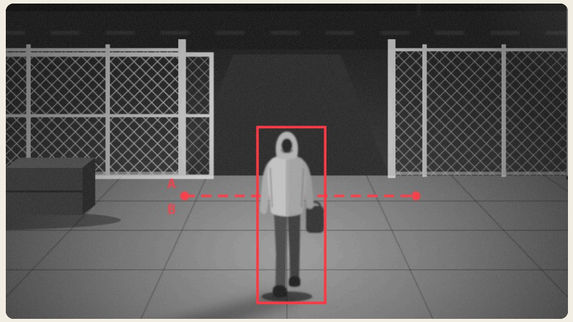

− 3…60 S BEFORE

ALARM

+ 3…60 S AFTER

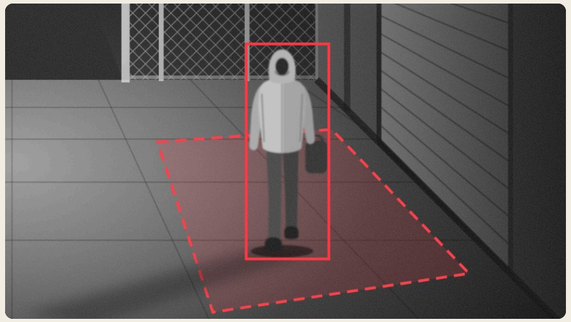

DETECT

A camera notices him.

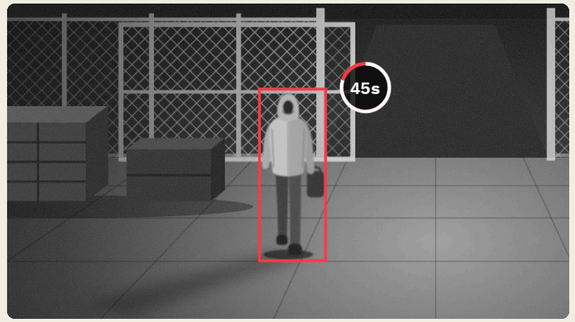

01 Line crossing

“He came through the gate.”

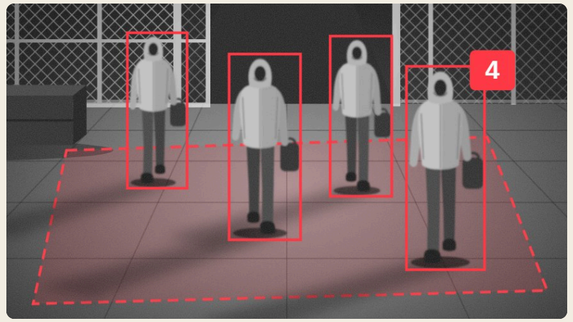

02 Zone intrusion

“He is at the loading bay.”

03 Loitering

“He has been there 45 seconds.”

04 Overcrowding

“There are four of them.”

It looks for people, cars, trucks, buses, motorcycles and bicycles, with the cameras already on the wall. A cat is not on the list.

THEN A SECOND LOOK

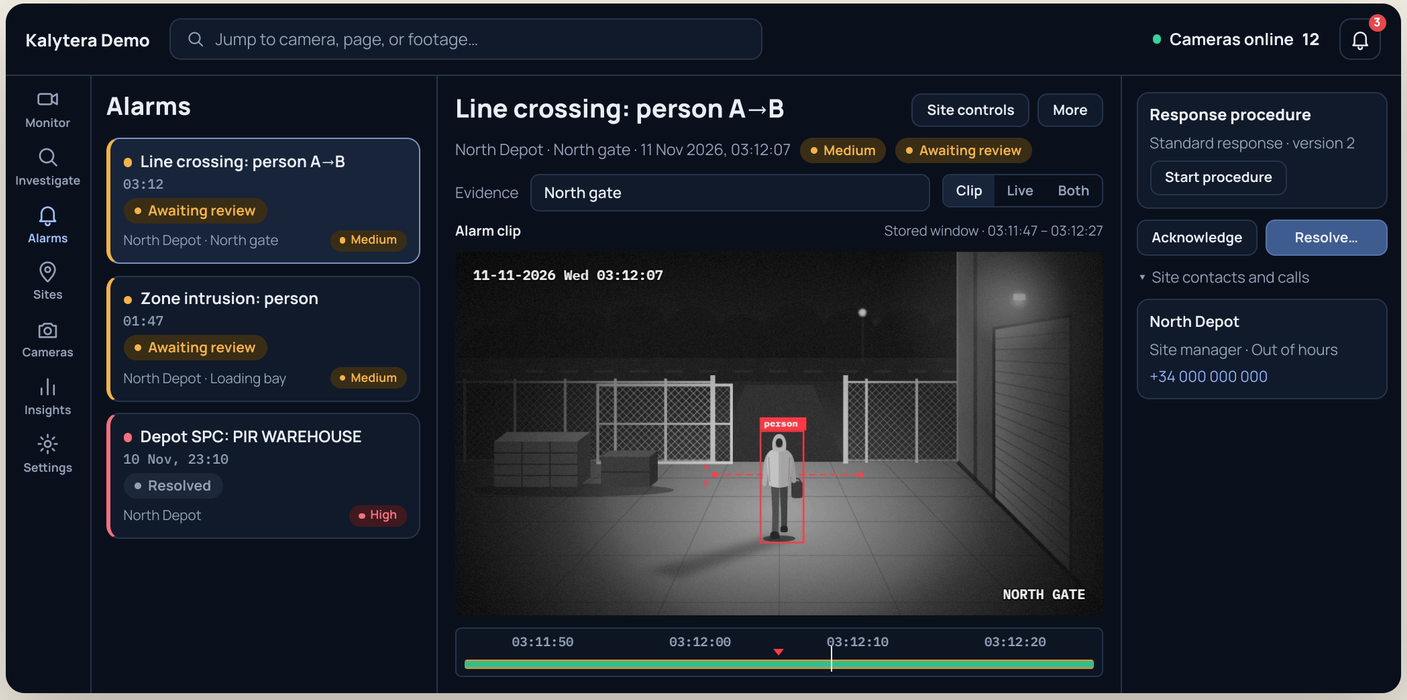

For alarms from a panel, a camera email or a wired input, an optional AI check looks at the cameras before the monitoring station is called. Somebody there: it goes at once. Nobody: it can stop here.

RESPOND

He hears your voice.

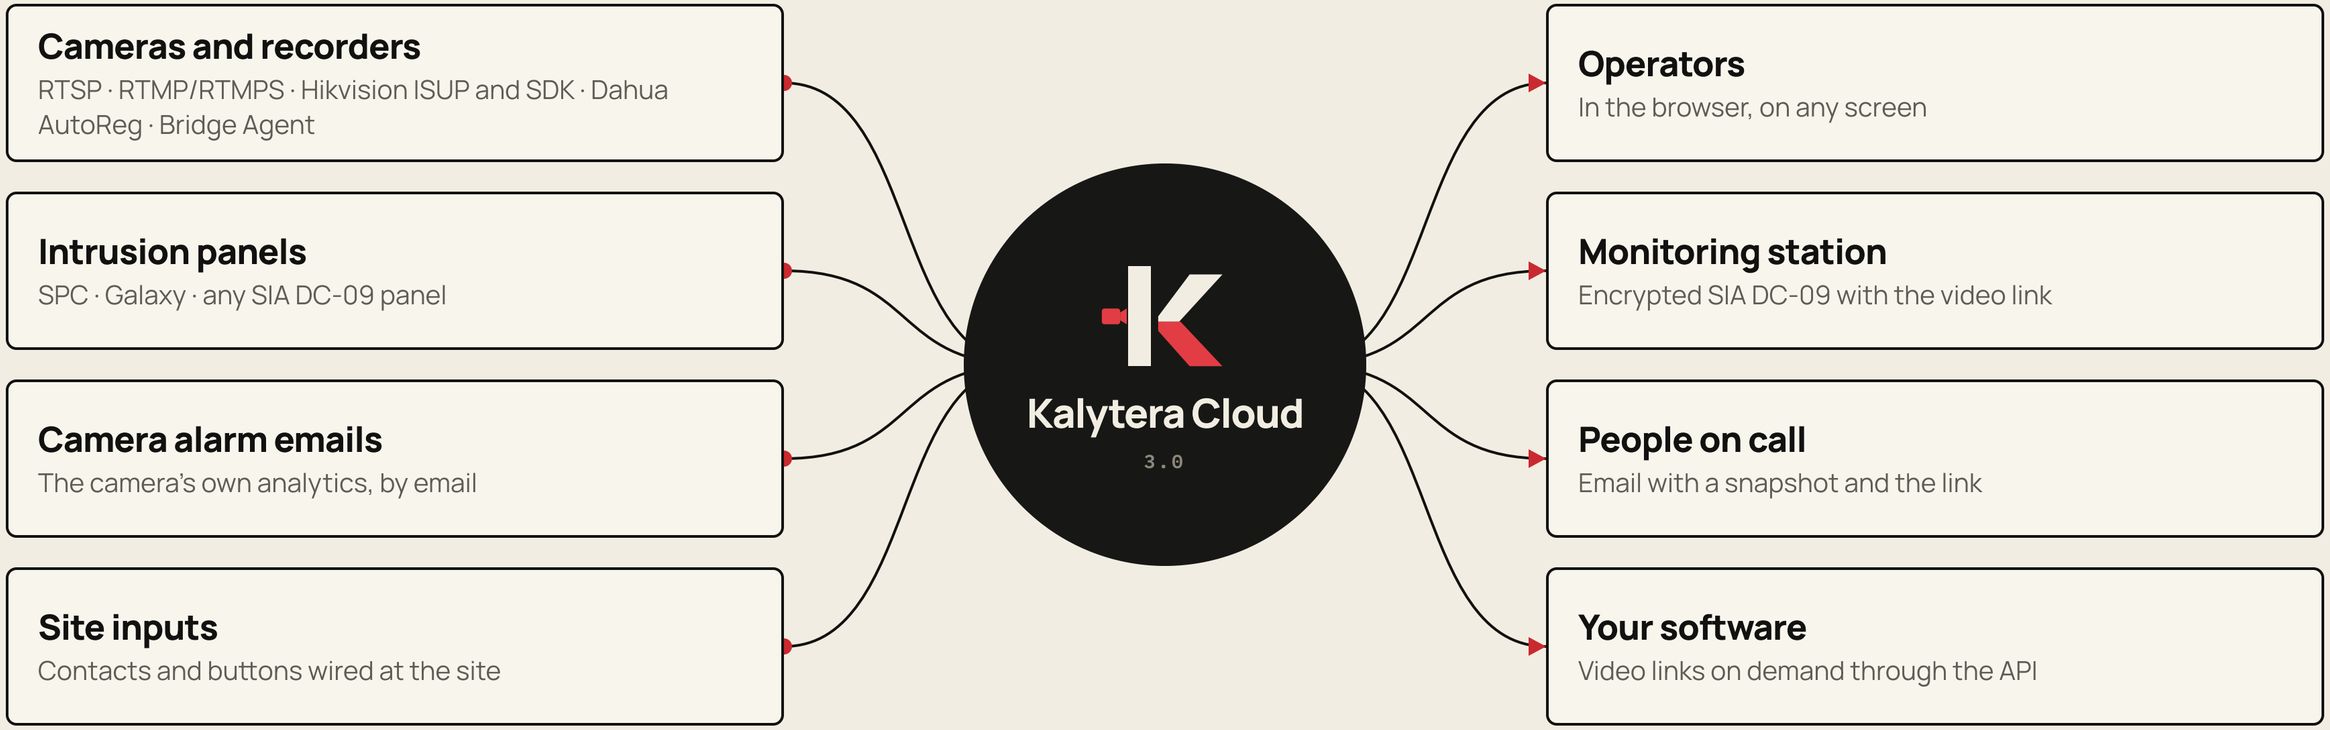

He was sure nobody was watching.

- In the portal, hold a button and talk through the Axis speakers on site
- Or play a recorded message
- Switch a light, a siren, a gate
- Arm and disarm with a button, a key switch, a schedule or the panel's own areas
- The response procedure and the site's contacts, on the alarm itself
- Close it as a confirmed event or a false alarm. Every step is on record

CONNECT

Keep everything you already have.

Push, ISUP, AutoReg and the Bridge Agent call out from the site. No ports to open.
Video analytics run on cameras connected directly, not through the Bridge Agent. Talking through a speaker needs a Bridge Agent, and site controls are enabled on request.

THE REST OF THE DAY

The other 23 hours and 59 minutes.

6×6
camera walls, saved layouts

8×
digital zoom, in HD

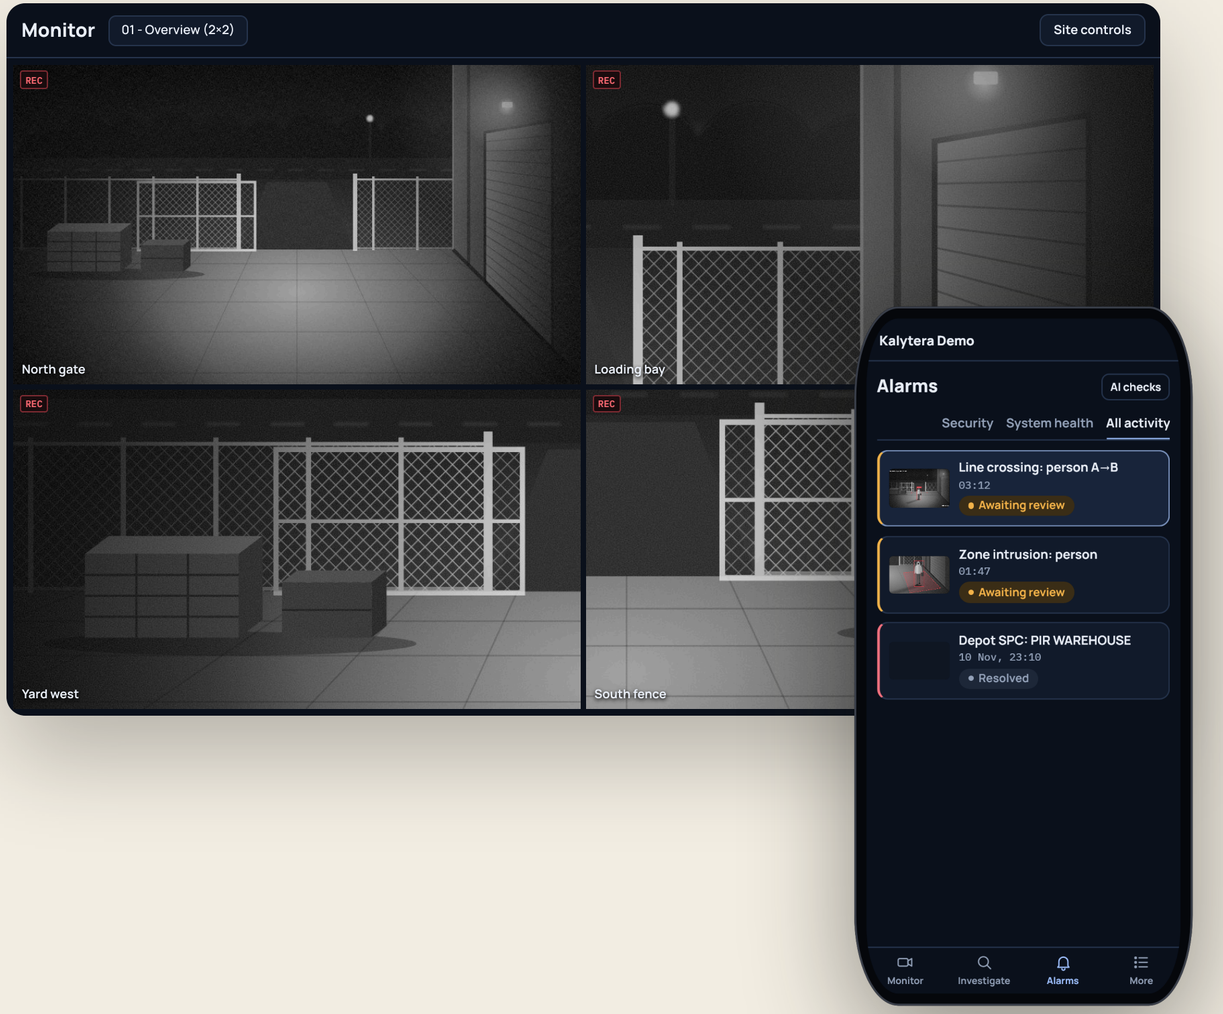

1–30
days of cloud recording

5
roles, or your own

2
languages: English, Spanish

0
installs for operators

A whole control room in a browser: synchronised playback, search by people or vehicles, bookmarks, cases and MP4 export, audit history, two-step sign-in, and a layout for the phone in your pocket.

WHO IT IS FOR

Whoever answers the alarm.

01

Installers

Add verified alarms to cameras you installed years ago, without new cameras and without opening ports on the site. Start on the free plan and give each customer a private portal.

02

Monitoring stations

Decide in seconds instead of phone calls. The alarm arrives over encrypted SIA DC-09 with the video one click away, inside your own console. Send patrols to burglars, not to cats.

03

Companies with many sites

Every site on one screen: live, recorded, alarms and who did what. And fewer calls at 03:12 about the wind.

PACKAGES

Start free.

Live

FREE

- Live view of one site
- Up to eight cameras
- Camera offline and online alarms
- A live-only video link through the API

Verify

EVERYTHING IN LIVE, PLUS

- Video evidence on alarms
- Alarm video links
- Delivery to a monitoring station

Verify + VMS

EVERYTHING IN VERIFY, PLUS

- Cloud recording
- Playback and timeline
- The retention you choose
- Export

Optional on Verify and Verify + VMS: video analytics, panel alarms, email alarms, Bridge Agent, image integrity checks.
Verify and Verify + VMS are quoted after a pilot on your own cameras.

Kalytera | CLOUD

Stop guessing at 03:12.

Lend us a few of your cameras. Then walk through your own gate.
